The industry’s best value for high-end Digital Satellite News Gathering (DSNG) and live sports broadcasting applications, the Harmonic ViBE® CP3000 (formerly Ellipse® 3000) family of contribution encoders combines superior video quality, the highest level of function integration, and ease of use in an economical, compact package.

The innovative ViBE CP3000 product family includes the first DSNG encoder with an integrated broadcast satellite modulator that supports the DVB-S2 and DVB-CID standards, as well as broadcast-quality video contribution over the Internet. The encoders leverage Harmonic’s industry-leading compression expertise and a flexible system architecture for all mission-critical contribution applications. Multi-format, multi-codec versatility, low latency and optional integrated modulators make the ViBE compression platform ideal for both DSNG and fixed contribution. A compact footprint and plug-and-play deployment deliver the additional benefit of low cost of ownership.

ViBE CP3000 encoders support all SD and HD MPEG-2 and MPEG-4 AVC codecs at 4:2:0 or 4:2:2 chroma subsampling and 8 or 10 bits. Fully firmware upgradeable, the encoders offer a smooth and cost-effective migration path from MPEG-2 SD 4:2:0 8-bit to AVC HD 4:2:2 10-bit compression schemes, making them among the most versatile contribution encoders available. 3G SDI input enables encoding of HD content at resolutions up to 1080i/25-29.97-30.

At just 1 RU, compact and rugged ViBE CP3000 encoders are a perfect fit for DSNG vehicles, teleports and flyaway packages operating on the C, Ku or Ka bands. Four models are available, assuring the deployment of systems precisely tailored to a user’s application:

**Fixed Contribution Over IP or Telco Networks**
- **CP3102** – Features simultaneous IP and DVB-ASI outputs, 3G SDI input, and optional dual power supplies

**DSNG**
- **CP3202** – Features 3G SDI input, simultaneous IP and DVB-ASI outputs, an integrated broadcast satellite modulator with DVB-S/S2/S2X and DVB-CID support on top of NIT-CID, IF and L-band interfaces on the same board, simultaneous L-band, IF and DVB-ASI output, and optional dual power supplies

### HIGHLIGHTS
- MPEG-2 and MPEG-4 AVC SD/HD 4:2:0/4:2:2 8/10-bit encoding
- Format support up to 1080i/25-29.97-30
- Audio encoding of up to eight stereo or 16 mono channels
- Optional integrated broadcast satellite modulator supporting DVB-S/S2/S2X and DVB-CID on top of NIT-CID; roll-off factor up to 5%
- Broadcast-quality video contribution over the Internet
- Simultaneous RF, IP and DVB-ASI outputs
- IF and RF interfaces on the same chassis
- Choice of single or dual power supplies
- Ultra-low delay mode
- User-friendly front-panel controls or web-based management
- BISS scrambling
- 1:1 stand-alone redundancy
- Fast boot time
- Pay-as-you-grow scalability
Business Benefits
Pristine Video Quality
The ability to encode 1080i/25-29.97-30 content in AVC 4:2:2 10-bit enables the transmission of vivid video, augmenting your ability to offer customers high video quality.

“Pay-As-You-Grow” Scalability
License-based pricing assures that customers pay only for the features they need. Video codecs and formats are easily added in ViBE CP3000 encoders via firmware upgrade, enabling a scalable migration path that provides operational flexibility and business continuity and extends the system’s value.

Low CAPEX and OPEX
The integrated modulator in the CP3202 eliminates the need to purchase costly external stand-alone devices for satellite uplink. As such, the CP3202 encoder helps assure that your investment will pay off well into the future. The small system footprint and low power consumption inherent to all ViBE CP3000 encoders further ensures exceptional ROI.

Integrated Redundant Path Support
Simultaneous L-band, IF and DVB-ASI outputs on ViBE CP3000 encoders provide alternate distribution channels in the event of link failure.

Contribution Over the Internet
With support for broadcast-quality video contribution over unmanaged networks, ViBE CP3000 dramatically alters the economics of gathering and distributing news and sports content from locations with Internet access.

End-to-End Contribution Solution
ViBE CP3000 encoders are the perfect complement to Harmonic’s ProView™ 7100 and 8100 integrated receiver-decoders. Compress AVC HD 4:2:2 10-bit video with the ViBE CP3000, then use the ProView 7100 for decompression at the same sampling and bitrate, and the result is a contribution workflow with nearly lossless video quality.

Content Protection
ViBE CP3000 encoders help prevent signal interception with industry-standard BISS (Basic Interoperability Scrambling System) mode 1 and BISS-E encryption. With support for the new Carrier ID system (DVB-CID), currently in development by the satellite Interference Reduction Group (sIRG), the CP3202 also makes it easier to identify interfering carriers and respond to a radio frequency interference (RFI) event, resulting in improved quality of service (QoS) and reduced operating costs.

Technical Benefits
Video Encoding
Utilizing the industry’s most advanced silicon and ASIC compression technologies, ViBE CP3000 encoders offer superior-quality compression at data rates up to 100 Mbps.

Audio Encoding
ViBE CP3000 encoders support four AES/EBU embedded stereo pairs, two analog stereo pairs or four mono channels as standard. The addition of an optional audio expansion module increases support to eight digital or analog stereo pairs, or 16 mono channels. A range of sampling rates, an internal sample rate convertor (SRC) and an advanced coding scheme ensure reliable and high-quality audio encoding.

Low Delay
Low latency on ViBE CP3000 encoders helps eliminate awkward pauses during handoffs between field and studio talent, and is available for all encoding modes.

Ease of Use
Controlled by a front-panel operating menu or web GUI, the simple ViBE CP3000 menu structure is specifically tailored for contribution applications, with frequently used, operation-critical controls available via hot keys.

Plug and Play
Fast boot times prepare ViBE CP3000 encoders for action right out of the box, and configuration presets allow multiple user settings to be saved and quickly recalled, increasing the ability to get on air fast. Switching between 4:2:2 low-delay and 4:2:0 modes, for instance, is easily accomplished on the GUI, eliminating the need to manually change settings for different production setups.

Resilience Against Packet Loss
In video-over-IP applications, ViBE CP3000 encoders employ the SMPTE 2022 protocol to minimize packet loss by inserting forward error correction (FEC) packets in the transport stream. These packets are used by the reception device to detect lost packets and automatically recover from losses when they occur.
Efficient Multicast of Multiple Services
Vibe CP3000 encoders support the creation of multiple single-program transport streams, which can be multicast to 16 different ports or IP addresses. A separate PSI is generated for each SPTS. Users may choose optional BISS scrambling with a separate scrambling key for each SPTS.

High-Speed Data Transmission Over Satellite
The CP3200 encoder supports data transmission up to 20 Mbps via ETSI EN301 192 DVB MPE encoding, which enables IP packet transmission via satellite using an MPEG-2 transport stream.

Modulated Outputs
The on-board modulator on the CP3202 offers DVB-S/S2/DSNG transmission modes and QPSK, 8PSK and 16APSK modulation. CP3202 supports IF and L-band outputs on the same board. The modulation output can directly feed the up-converter, providing a very compact uplink package. Standard and extended roll-off factors of 15%, 10% and 5% enable highly efficient utilization of transponder bandwidth.

L-Band Monitoring
L-band monitoring output on CP3202 encoders provides real-time, on-the-spot monitoring of modulated information as it is transmitted. L-band and IF inputs in the same chassis, available on the CP3202 only, offers the additional benefits of lower CAPEX and increased workflow efficiency when moving from one deployment to the next.

Compact Footprint
Vibe CP3000 encoders occupy just 1 RU without the need for ventilation space above or below, saving real estate and reducing power consumption.

Reliability
Vibe CP3000 encoders are built rugged to assure high performance in most any production environment. 1:1 stand-alone redundancy assures the highest level of resiliency while simultaneously simplifying workflows, and for even greater peace of mind, optional dual power supplies are available on the CP3102 and CP3202.

**IP Output**
- Dual GbE IP output, RJ-45, auto-negotiation
- Auto MDI/MDIX crossover
- UDP/RTP
- TOS, TTL configurable values
- SMPTE-2022 FEC (optional)¹
- M-SPTS support (optional)¹
- Special FEC and ARQ streaming for contribution over the Internet (optional)¹

**G.703 (optional for CP3102)²**
- Connectivity: D53
- Number of Ports: Two
- Output Data Rate: 44.736 Mbps
- Interface: B325

**INTEGRATED SATELLITE MODULATOR OUTPUT**

**Modulation Formats (CP3202)**
- DVB-S: QPSK
- DVB-S2: QPSK, 8PSK, 16APSK, 32APSK²
- DVB-S2EXT*: QPSK, 8PSK, 16APSK, 32APSK, 64APSK²
- Carrier ID: NIT-CID, DVB-CID
- Symbol Rate: 50 kbps-72 Mbps¹
- Roll-Off: 20%, 25%, 35%
- Extensions Roll-Off: 5%, 10%, 15%
- Output: IF and L-band (on the same board)

**L-Band Output**
- Output Frequency: 950-1750 MHz, 95 Hz steps
- Output Power: ±50 Ω
- Spurious Level: -45 dBm, -7 dBm (0.5 dB step)
- Selectable 10-MHz Reference Clock: -64 dBc @ -10 dBm
- In-band or external
- L-Band Monitoring Output Power: -45 dBm
- L-Band Monitoring Output Frequency Features: Transmit frequency
- Features: Constant code rate modulation (CCM)
- 16 Kb and 64 Kb FEC block support
- Pilot mode
- External block up-converter (BUC) support
- DC Feed for BUC up to 24 VDC 400 mA
