

THE BROADBAND INTELLIGENCE FABRIC

Fundamentally transform broadband operations.

Turn data from every system and every vendor into decisions your team can act on, with cOS SensAI™ for network operators and service providers.

Detect fast. Diagnose clearly. Empower decisive action.

Any network. Any vendor. Any operations tool.

Lower OPEX

Fewer truck rolls and repeat calls, the biggest cost buckets in daily operations.

Lower churn, higher NPS

Per-subscriber QoE catches issues before the subscriber calls, not after, so you reduce churn.

One operation, every network

Any vendor, fiber or DOCSIS, across every M&A estate. No swivel chair, no parallel stacks.

Consolidate your tools

Retire the point tools and the spend behind them.

THE SEVEN SENTINELS

Your data flows in from every system you run. The seven Sentinels work together to turn it into answers, delivered into the tools your teams already use. No new UI.
