

High-Speed Broadband for Hospitality & MDUs

Deliver revenue-driving WiFi, video and phone services to apartments, hotels, hospitals, universities and multi-dwelling units over any wire.

Any high-speed service over any network

Meeting commercial customer expectations requires the right mix of network strategy and toolsets.

Provide high-speed broadband internet and video services to address any business service and any combination of requirements using Harmonic's market-leading cOS™ fiber-to-anything (FTTx) solution.

Offer more value with less

With the cOS virtualized broadband platform, you leverage your existing premise wiring with centralized management of distributed devices deployed on telephone phones, hung on strands, mounted in underground vaults, affixed to walls or placed in outdoor cabinetry.

You can also replace gear for high-bandwidth accounts with Harmonic's integrated Fin 10G SFP+ OLT module, which plugs directly into uplink ports.

Harmonic's solution can also be used as the uplink for a Harmonic RPD to regenerate DOCSIS or QAM video signals within a customer premise.

Deploy fast & easily scale

Simplify configuration and ensure optimum performance using streaming telemetry data for analytics that drive world-class quality of service. You can roll out high-value services across locations in mere weeks with Harmonic's FTTP solution for hospitality and MDU applications.
