

WE MAKE CHANNEL ORIENTATION SIMPLE

The most advanced, fully managed channel origination and distribution platform for total content control.

YOUR CHANNEL MADE SMARTER

VOS[®]360 Channel Origination & Distribution Platform is a schedule-based delivery solution. Create linear and live channels, stream live events either direct to consumers or syndication partners. You keep the creative control of your sources, assets, schedules, monitoring and metrics, with real-time agility.

Your operational teams gain the flexibility to handle large content libraries and on-air playlists for each channel. With a wide range of sources, you can deliver compelling content in the format you want.

The platform lets you seize every opportunity to create value. You can launch and stream new channels without upfront infrastructure costs and save time with one simple platform.

Faster channel creation & delivery for your business.

You can rely on our experience. We develop and manage video streams for some of the largest and most ambitious service providers around the world.

Decades of media industry expertise are working for you.

Simple Orchestration & Integration.

VOS360 is built with docker containers & microservices using Kubernetes orchestration. It offers a rich API and easy-to-use features accessible at any time through an intuitive user interface.

The solution is cloud agnostic and integrates with a wide range of video applications. This neutrality enables rapid integration of new partners and capabilities at any time.

Flexible from Source to Screen.

End-to-end capabilities simplify all stages of the media processing and delivery chain. Receive content at the source and transfer to the cloud, then right to the viewer's screen. You will be able to streamline and unify your workflows to simplify operations.

It's a perfect combination of media operations with the most modern cloud infrastructure.

Secure & Reliable Operations.

Our DevOps team guarantees the highest levels of availability and reliability, around the clock. All IT infrastructures, media processing and delivery applications are always fully functional, with maximum uptime.

We take the guesswork out of your upgrades and enhancements. It's now seamless.
