License Agreement and Limited Warranty
1. AGREEMENT: This is a legal agreement ("Agreement") between you ("you" or "your") and Harmonic, or its appropriate local affiliate ("Harmonic", "we", "us" or "our"). Use of our products or any updates thereto purchased or validly obtained by you (the "Products"), and/or the Software (as defined below) (collectively, the "System"), constitutes your acceptance of this Agreement. "Use" includes opening or breaking the seal on the packet containing this Agreement, installing or downloading the Software as defined below or using the Software preloaded or embedded in your System. As used herein, the term "Software" means the Harmonic owned software and/or firmware used in or with the Products and embedded into, provided with or loaded onto the Products in object code format, but does not include, and this Agreement does not address, any third-party or free or open source software separately licensed to you ("Third Party Software"). If you do not agree to this Agreement, you shall promptly return the System with a dated receipt to the seller for a full refund.
2. LICENS E: Subject to the terms and conditions of this Agreement (including payment), we hereby grant you a nonexclusive, nontransferable license to use the object code version of the Software embedded into, provided solely for use with or loaded onto the Product, and the accompanying documentation ("Documentation") for your internal business purposes. The Software and any authorized copies are owned by us or our suppliers, and are protected by law, including without limitation the copyright laws and treaties of the U.S.A. and other countries. Evaluation versions of the Software may be subject to a time-limited license key.

3. RESTRICTIONS: You (and your employees and contractors) shall not attempt to reverse engineer, disassemble, modify, translate, create derivative works of, rent, lease (including use on a timesharing, applications service provider, service bureau or similar basis), loan, distribute, sublicense or otherwise transfer the System, in whole or part except to the extent otherwise permitted by law. The Software may be operated on a network only if and as permitted by its Documentation. You may make one (1) back up copy of the object code of the Software for archival purposes only. Evaluation Software will be run in a lab, nonproductive environment. Results of any benchmark or other performance tests may not be disclosed to any third party without our prior written consent. Title to and ownership of the Software and all related trade secret, trademark, and other intellectual property rights in the System, shall remain our or our licensors' property. You shall not remove or alter any copyright or other proprietary rights notice on the System. We reserve all rights not expressly granted.

4. LIMITED WARRANTY: (a) Limited Warranty. We warrant to you that, commencing on your receipt of a Product and terminating 1 year thereafter, the System will perform substantially in accordance with its then-current appropriate Documentation. The Product (including replacements) may consist of new, used or previously-installed components. (b) Remedies. If the System fails to comply with such warranty during such period, as your sole remedy, you must return the same in compliance with our product return policy, and we shall, at our option, repair or replace the System, provide a workaround, or refund the fees you paid. Replacement Systems are warranted for the original System's remaining warranty period. (c) Exclusions. EVALUATION SOFTWARE IS LICENSED ON AS-IS BASIS AND SUBJECT TO 4(d). We will have no obligation under this limited warranty due to: (i) negligence, misuse or abuse of the System, such as unusual physical or electrical stress, misuse or accidents; (ii) use of the System other than in accordance with the Documentation; (iii) modifications, alterations or repairs to the System made by a party other than us or our representative; (iv) the combination, operation or use of the System with equipment, devices, software or data not supplied by us; (v) any third party hardware or Third Party Software, whether or not provided by us; (vi) any failure other than by us to comply with handling, operating, environmental, storage or maintenance requirements for the System in the Documentation, including, without limitation, temperature or humidity ranges. (d) Disclaimers. We are not responsible for your software, firmware, information, or data contained in, stored on, or integrated with any Product returned to us for repair or replacement. SUCH LIMITED WARRANTY IS IN LIEU OF, AND WE SPECIFICALLY DISCLAIM, ANY AND ALL OTHER WARRANTIES, WHETHER EXPRESS, IMPLIED OR STATUTORY, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTIES OF SATISFACTORY QUALITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT. WE DO NOT WARRANT THAT THE SOFTWARE WILL MEET YOUR REQUIREMENTS OR BE UNINTERRUPTED OR ERROR-FREE. NO ADVICE OR INFORMATION, WHETHER ORAL OR WRITTEN, OBTAINED FROM US OR ELSEWHERE, WILL CREATE ANY WARRANTY NOT EXPRESSLY STATED IN THIS AGREEMENT. Some jurisdictions do not allow the exclusion of implied warranties or limitations on how long an implied warranty may last, so such exclusions may not apply to you. In that event, such implied warranties are limited to 60 days from the date you purchased the System or the shortest period permitted by applicable law, if longer. This warranty gives you specific legal rights and you may have other rights which vary from state to state or country to country.

5. LIMITATION OF LIABILITY: WE AND OUR AFFILIATES, SUPPLIERS, LICENSORS, OR SALES CHANNELS ("REPRESENTATIVES") SHALL NOT BE LIABLE TO YOU FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE, OR EXEMPLARY DAMAGES OF ANY KIND, INCLUDING BUT NOT LIMITED TO LOST REVENUES, PROFITS OR SAVINGS, OR THE COST OF SUBSTITUTE GOODS, HOWEVER CAUSED, UNDER CONTRACT, TORT, BREACH OF WARRANTY, NEGLIGENCE, OR OTHERWISE, EVEN IF WE WERE ADVISED OF THE POSSIBILITY OF SUCH LOSS OR DAMAGES. NOTWITHSTANDING ANY OTHER PROVISIONS OF THIS AGREEMENT, WE AND OUR REPRESENTATIVES TOTAL LIABILITY TO YOU ARISING FROM OR RELATING TO THIS AGREEMENT OR THE SYSTEM SHALL BE LIMITED TO THE TOTAL PAYMENTS TO US UNDER THIS AGREEMENT FOR THE SYSTEM. THE FOREGOING LIMITATIONS SHALL NOT APPLY TO DEATH OR PERSONAL INJURY TO PERSONS OR TANGIBLE PROPERTY IN ANY JURISDICTION WHERE APPLICABLE LAW PROHIBITS SUCH LIMITATION. YOU ARE SOLELY RESPONSIBLE FOR BACKING UP YOUR DATA AND FILES, AND HEREBY RELEASE US AND OUR REPRESENTATIVES FROM ANY LIABILITY FOR DAMAGES DUE TO THE LOSS OF ANY SUCH DATA OR FILES. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO SUCH EXCLUSIONS MAY NOT APPLY TO YOU.

6. CONFIDENTIALITY: Information in the System and the associated media, as well as the structure, organization and code of the Software, are proprietary to us and contain valuable trade secrets developed or acquired at great expense to us or our suppliers. You shall not disclose to others or utilize any such information except as expressly provided herein, except for information (i) lawfully received by the user from a third party which is not subject to confidentiality obligations; (ii) generally available to the public without breach of this Agreement; (iii) lawfully known to the user prior to its receipt of the System; or (iv) required by law to be disclosed.

7. SUPPORT: Updates, upgrades, fixes, maintenance or support for the System (an "Upgrade") after the limited warranty period may be available at separate fees and terms from us. Any Upgrades shall be subject to this Agreement, except for additional or inconsistent terms we specify. Upgrades do not extend the limited warranty period.

8. TERM; TERMINATION: The term of this Agreement shall continue unless terminated in accordance with this Section. We may terminate this Agreement at any time upon default by you of the license provisions of this Agreement, or any other material default by you of this Agreement not cured with thirty (30) days after written notice thereof. You may terminate this Agreement any time by terminating use of the System. Except for the first sentence of Section 2 ("License") and for Section 4(a) ("Limited Warranty"), all provisions of this Agreement shall survive termination of this Agreement. Upon any such termination, you shall certify in writing such termination and non-use to us.

9. EXPORT CONTROL: You agree that the Products and Software will not be shipped, transferred, or exported into any country or used in any manner prohibited by the United States Export Administration Act or any other export laws, restrictions, or regulations (the "Export Laws"). You will indemnify, defend and hold us harmless from any and all claims arising therefrom or relating thereto. In addition, if the Products or Software are identified as export controlled items under the Export Laws, we represent and warrant that you are not a citizen, or otherwise located within, an embargoed nation (including without limitation Iran, Iraq, Syria, Sudan, Libya, Cuba, North Korea, and Serbia) and that you are not otherwise prohibited under the Export Laws from receiving the Software. All rights to the Software and Products are granted on condition that such rights are forfeited if you fail to comply with the terms of this Agreement.

10. U.S. GOVERNMENT RIGHTS: The Software and the documentation which accompanies the Software are "Commercial Items," as that term is defined at 48 C.F.R. §2.101, consisting of "Commercial Computer Software" and "Commercial Computer Software Documentation," as such terms are used in 48 C.F.R. §2.212 or 48 C.F.R. §227.7202, as applicable. Consistent with 48 C.F.R. §2.212 or 48 C.F.R. §227.7202-1 through 227.7202-4, as applicable, the Commercial Computer Software and Commercial Computer Software Documentation are being licensed to U.S. Government as end users (a) only as Commercial Items and (b) with only those rights as granted to other end users pursuant to the terms and conditions herein. Harmonic, 4300 North First Street, San Jose, CA 95134 U.S.A.

11. GENERAL: You shall not assign, delegate or sub license your rights or obligations under this Agreement, by operation of law or otherwise, without our prior written consent, and any attempt without such consent shall be void. Subject to the preceding sentence, this Agreement binds and benefits permitted successors and assigns. This Agreement is subject to conflicts of law principles. The U.N. Convention on Contracts for the International Sale of Goods is disclaimed. If any claim arises out of this Agreement, the parties hereby submit to the exclusive jurisdiction and venue of the federal and state courts located in Santa Clara County, California. In addition to any other rights or remedies, we shall be entitled to injunctive and other equitable relief, without posting bond or other security, to prevent any material breach of this Agreement. We may change the terms, conditions and pricing relating to the future licensing of our Systems and other intellectual property rights, including this Agreement, from time to time. No waiver will be implied from conduct or failure to enforce rights nor effective unless in a writing signed on behalf of the party against whom the waiver is asserted. If any part of this Agreement is found unenforceable, the remaining parts will be enforced to the maximum extent permitted. There are no third-party beneficiaries to this Agreement.

©2016 Harmonic Inc. All rights reserved.
Agreement. We are not bound by additional and/or conflicting provisions in any order, acceptance, or other correspondence unless we expressly agree in writing. This Agreement is the complete and exclusive statement of agreement between the parties as to its subject matter and supersedes all proposals or prior agreements, verbal or written, advertising, representations or communications concerning the System.

Every reasonable attempt has been made to comply with all licensing requirements for all components used in the system. Any oversight is unintentional and will be remedied if brought to the attention of Harmonic at support@harmonicinc.com.

Documentation Conventions

This guide may use some special symbols and fonts to call your attention to important information. The following symbols appear throughout this guide:

**DANGER:** The Danger symbol calls your attention to information that, if ignored, can cause physical harm to you.

**CAUTION:** The Caution symbol calls your attention to information that, if ignored, can adversely affect the performance of your Harmonic product, or that can make a procedure needlessly difficult.

**LASER DANGER:** The Laser symbol and the Danger alert call your attention to information about the lasers in this product that, if ignored, can cause physical harm to you.

**NOTE:** The Note symbol calls your attention to additional information that you will benefit from heeding. It may be used to call attention to an especially important piece of information you need, or it may provide additional information that applies in only some carefully delineated circumstances.

**IMPORTANT:** The Important symbol calls your attention to information that should stand out when you are reading product details and procedural information.

**TIP:** The Tip symbol calls your attention to parenthetical information that is not necessary for performing a given procedure, but which, if followed, might make the procedure or its subsequent steps easier, smoother, or more efficient.

In addition to these symbols, this guide may use the following text conventions:

<table>

ProStream 1000 Overview

ProStream 1000 is a digital video multiplexer/scrambler that suits the dynamic requirements of various market segments such as Telco, Cable, DBS and Broadcast. ProStream 1000 receives MPEG streams over Gigabit Ethernet (GbE) and/or DVB-ASI inputs. It multiplexes, scrambles and outputs the content over GbE and/or DVB-ASI ports. The number of input and output ports changes according to device configuration to fully meet customer needs.

Control Modes

ProStream 1000 supports the following control mode options:

- **N MX** - Harmonic’s N MX Digital Service Manager offers comprehensive management of networks including automatic device redundancy, source switching and automation. ProStream 1000 is managed as an integral part of a broadcasting system.

  **NOTE:** The current ProStream 1000 version is NMX controlled only.

- **Standalone** - The device is managed as a standalone device independent of the broadcasting system. It is controlled by a Web client, which is an on-board interface accessible through Microsoft Internet Explorer with comprehensive management capabilities.

  **NOTE:** Some features, like scrambling and device redundancy, are supported in NMX control mode only.

System Requirements of Managing PC

System requirements of the managing computer vary according to the control mode as the following table lists.

**Table 1-1: Control Mode Requirements**

<table>
<thead>
<tr>
<th>Control Mode</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>NMX</td>
<td>NMX runs on an NMX computer, which is a Harmonic approved Dell™ Computer.</td>
</tr>
</tbody>

               - Windows 2000, XP  
               - Internet Explorer 5.0 - 6.0 |

ProStream 1000 Device Features

The main features and capabilities of the device are as follows:

- **Modular platform** - Provides a density of up to 5 IOM (Input Output Module) cards in a single one-rack-unit (1-RU) chassis. The modular design allows a flexible and easy field replacement of cards as well as field upgrades of SW and HW features.

- **IP IOM card** - When mounted in the device, ProStream 1000 receives and transmits data via a GbE port. Each IP IOM card has two active GbE ports.
DVB-ASI IOM card - When mounted in the device, ProStream 1000 receives and transmits data via four DVB-ASI ports. Each port can be configured as an input or output port. The following two types of DVB-ASI cards are available:

- **ASI-RMX** - Allows the ProStream 1000 to receive and transmit data and streams and to re-multiplex them according to the user’s needs. The ASI-RMX card supports a maximum bitrate of 140 Mbps.
- **ASI-SCR** - In addition to the ASI-RMX capabilities, this card type also supports DVB-CSA (Common Scrambling Algorithm). The ASI-SCR card supports a maximum bitrate of 140 Mbps.

**NOTE:** For further details, see [DVB-ASI IOM Card](#).

- Input Extraction capability - The device extracts incoming feeds and displays their structure and elements on the control interface in a user friendly view.
- Full multiplexing capability - Content can be routed from any input port to any output port.
- Advanced scrambling - ProStream 1000 scrambles the input content in compliance with the DVB-CSA standard. This feature is available for both GbE and DVB-ASI output ports, in NMX control mode.

**ProStream 1000 Device Types**

Harmonic ProStream 1000 device is available with two types of chassis:

- With a removable front panel
- With a fixed front panel

**ProStream 1000 Front Panel**

The front panel of ProStream 1000 contains the following:

- Front bezel
- Control panel
- LEDs

**Figure 1-1: ProStream 1000 Front Panel**

**Front Bezel**

ProStream 1000 has a detachable front bezel that snaps on top of the control panel. The air inlets located on the left side of the bezel provide access to the reusable air filters. See [Air Filters](#) for information about cleaning the air filters.
Control Panel

The control panel consists of an LCD display and a keypad. The control panel enables preliminary configuration and basic monitoring of the ProStream 1000. It is usually used for standalone devices. For more information, see Initial Device Configuration.

Front Panel LEDs

The four LEDs on the front panel indicate the operational status. The LEDs function the same whether ProStream 1000 is operating in standalone or NMX control mode. The following table describes the front panel LEDs, from top to bottom.

Table 1–2: Front Panel LEDs

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

ProStream 1000 Back Panel

The back panel of ProStream 1000 contains the following:

- Power plug
- Central Processing Card (CPC).
- Input/Output Module (IOM) card slots

The following figure illustrates the back panel of the ProStream 1000 device with an optional configuration of the IOM cards. The number and type of mounted IOM cards varies according to the needs of the user.

Figure 1–2: ProStream 1000 Back Panel
Power Supply

ProStream 1000 supports both VAC and VDC, according to requirements. A fuse is located inside the power socket. For information about replacing the fuse, see Fuse Replacement. The compartment next to the power cable holds a spare fuse.

VAC Power Supply

The power supply supports a 85-264 VAC range. The required voltage is automatically selected according to the wall outlet.

The following table lists the power supply specifications.

Table 1-3: VAC Power Supply Specifications

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input voltage</td>
<td>85 - 264 VAC (autoselected)</td>
</tr>
<tr>
<td>Line frequency</td>
<td>47 - 63 Hz</td>
</tr>
<tr>
<td>Typical power consumption</td>
<td>125 W</td>
</tr>
</tbody>
</table>

-48 VDC Power Supply

The -48 VDC power supply unit is supplied with the required 3-pin male connector. See Appendix E, Wiring the -48VDC Power Supply for instructions to connect the power supply.

The following table lists the ProStream 1000’s electrical rating for the -48VDC version.

Table 1-4: -48VDC Power Supply

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voltage</td>
<td>36 - 72VDC</td>
</tr>
<tr>
<td>Maximum Operating Current</td>
<td>4A</td>
</tr>
</tbody>
</table>

Each power supply unit features two LEDs. For a detailed description, see VAC Power Supply.

NOTE: Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

Central Processing Card (CPC)

The Central Processing Card (CPC) is the main card of the ProStream 1000 platform. It includes the communication interfaces of the device and additional components, as follows:

- Three Ethernet ports - Ethernet ports allow connection to separate networks. The Ethernet ports are labeled ETH1, ETH2 and ETH3. The ETH3 port is used to connect the device to the management network. The ETH2 port is used to connect the device to the CAS network when required. ETH1 is optional for future use.
  
  ETH1 is 10/100 Base-T port and ETH 2 and ETH3 are 10/100/1000 Base-T ports. For cabling instructions, see Installing the ProStream 1000 Unit.

- EIA-RS-232 Serial Communication Port - Used by technical support only.
■ Status LEDs - Currently not in use.
■ Fault Relay Port - Currently not in use.
■ CPC LEDs - The following table lists the CPC LEDs from top to bottom and describes their functionality. The LEDs function in a similar way whether ProStream 1000 operates in standalone or NMX control mode.

**Table 1-5: CPC LEDs**

<table>
<thead>
<tr>
<th>LED</th>

<td>Same as front panel. An alarm has been issued. For further details, refer to Troubleshooting.</td>
</tr>
<tr>
<td>Locator</td>
<td>Blue</td>
<td>Identify unit, indicates the device when it needs service.</td>
</tr>
</tbody>
</table>

**IOM Slots and Cards**

The ProStream 1000 device back panel has five Input Output Module (IOM) slots labeled one to five. Each one of the slots accommodates a single IOM card. The following figure illustrates the arrangement of the slots at the back panel:

![Figure 1-3: ProStream 1000 Slot Arrangement](image)

**Figure 1-3: ProStream 1000 Slot Arrangement**

ProStream 1000 version 5 and up supports two types of the DVB-ASI card and the GbE IOM card.

■ DVB-ASI RMX-IOM card
■ DVB-ASI SCR-IOM card
■ GbE IOM card
■ 8VSB Modulation card

**DVB-ASI IOM Card**

**NOTE:** The following information applies to both types of the DVB-ASI card.

Each DVB-ASI IOM card has four independent ports labeled ASI 1-ASI 4. Each port can be configured as an input or output port. The following table lists the ASI card specifications:

**Table 1-6: ASI Card Specifications**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
**GbE IOM Card**

GbE cards should be mounted in slots 1 and 2 only. Each GbE IOM card has two independent ports labeled GbE 1 and GbE 2. Both ports are active and work as two independent ports. Each port is bi-directional and can receive and transmit streams simultaneously. Each GbE port includes an SFP module receptacle. The following table lists the GbE card specifications of both cards.

**Table 1-9: GbE Card Specifications**

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Ports</td>
<td>Two independent GbE ports per IOM card. Each port serves simultaneously as an input and output port.</td>
</tr>
<tr>
<td>Connector</td>
<td>Two receptacles for SFP module.</td>
</tr>
<tr>
<td>Max. input bitrate</td>
<td>Up to 400 Mbps per card.</td>
</tr>
<tr>
<td>Number of input sockets</td>
<td>Up to 128 sockets SPTS or MPTS for both ports.</td>
</tr>
<tr>
<td>Input extraction</td>
<td>Extraction of incoming streams is displayed on the management interface.</td>
</tr>
<tr>
<td>Max. output bit rate</td>
<td>Up to 400 Mbps per card.</td>
</tr>
<tr>
<td>Number of output sockets</td>
<td>Up to 128 sockets SPTS or MPTS for both ports.</td>
</tr>
<tr>
<td>Input Dejittering capability</td>
<td>Up to 50msc point-to-point.</td>
</tr>
<tr>
<td>Multicast content</td>
<td>Content elements may be simultaneously routed to multiple output ports.</td>
</tr>
<tr>
<td>Null Packet Insertion</td>
<td>Constant bitrate output stream with null packet insertion and PCR correction.</td>
</tr>
<tr>
<td>IP UDP modes</td>
<td>The following IP UDP modes are supported in both input and output streams:</td>
</tr>
<tr>
<td></td>
<td>- IP UDP unicast</td>
</tr>
<tr>
<td></td>
<td>- IP UDP multicast (IGMP Ver. 2)</td>
</tr>
<tr>
<td>Max. number of input services</td>
<td>512 per device.</td>
</tr>
<tr>
<td>Max. number of output services</td>
<td>512 per device.</td>
</tr>
</tbody>
</table>
GbE Port LEDs

Each GbE port features two LEDs: Tx and Rx. The following table describes the available status of each LED.

Table 1-10: Status of GbE Port LEDs

<table>
<thead>
<tr>
<th>LED Status</th>
<th>Color</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activity</td>
<td>Green</td>
<td>On - A live fiber is connected to the port and a network link is detected. Blinking - Real traffic flows through the link.</td>
</tr>
<tr>
<td>Alarm</td>
<td>Red</td>
<td>On - Indicates an error in the GbE port.</td>
</tr>
</tbody>
</table>

SFP Module

The SFP (Small Form Pluggable) module converts incoming data to match the GbE card interface. There are two types of SFP modules:

- Fiber optic SFP
- Copper SFP

The following figure illustrates both types of the SFP module:

![SFP Types](image1.png)

**LASER DANGER:** Class I laser product.

You can use either type of SFP depending on the cable or fiber type you are using. You can purchase SFPs from Harmonic or other sources. In the latter case, it is strongly recommended to purchase SFP models qualified by Harmonic.

Table 1-11: SFP Types

<table>
<thead>
<tr>
<th>Fiber/Cable Type</th>
<th>Connector Type</th>
<th>Wave Length</th>
<th>Qualified SFP Make/Model</th>
</tr>
</thead>
<tbody>
<tr>
<td>Multimode fiber</td>
<td>2 x LC</td>
<td>850 nm</td>
<td>Finisar FTRJ-8519-7D</td>
</tr>
</tbody>
</table>
An optical SFP has two LC sockets, Receive (Rx) and Transmit (Tx). Use Multimode or Singlemode fiber optics to connect your Gigabit Ethernet switch to the Rx socket. If bi-directional topology is used, connect the Tx socket back to the switch. The following table lists the fibers and SFPs required accordingly.

### Table 1–12: Fiber and Required SFP

<table>
<thead>
<tr>
<th>Fiber/Cable Type</th>
<th>Connector Type</th>
<th>Wave Length</th>
<th>Qualified SFP Make/Model</th>
</tr>
</thead>
<tbody>

<td>Finisar FCMJ-8521-3(HR)</td>
</tr>
</tbody>
</table>

### 8VSB Modulation Card

The 8VSB modulation card is an RF input module that enables the reception of ATSC terrestrial TV. It receives four independent ATSC 8VSB signals on the inputs and sends to the outputs four MPEG-2 Transport Streams.

**NOTE:** The four inputs are enabled by optional firmware licenses.

### 8VSB Modulation Card Specifications

Table 1–13 provides the specifications for the RF module.

### Table 1–13: RF Module Specifications

<table>
<thead>
<tr>
<th>Feature</th>
<th>Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connectors</td>
<td>4x Type F, 75 Ω per IEC 60169-24.</td>

Chapter 2
Installing the ProStream 1000 Unit

This chapter describes how to install the device into a standard EIA 19-inch computer rack and to connect the cables.

Preparation

For installation and cabling, you need the following:

- Phillips screwdriver
- Rack-mount screws

Unpacking

The ProStream 1000 device is shipped in a specially designed container that ensures the integrity of the unit.

It contains the following items:

- Device
- Standard IEC power cord
- Spare air filters
- Installation manual

**NOTE:** The AC power input cable must comply with national electrical code and 18 AWG minimum.

Installing the Device in a Rack

This section describes how to mount the device in a standard 19-inch rack. A 30-inch deep rack with a spacer or chimney between racks with multiple devices is the recommended rack setup.

Chassis Warnings for Rack Mounting and Servicing

To prevent bodily injury when mounting or servicing this unit in a rack, you must take special precautions to ensure that the system remains stable. The following guidelines are provided to assure your safety:

- This unit should be mounted at the bottom of the rack if it is the only unit in the rack.
- When mounting this unit in a partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack.
- If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack.

Airflow

The airflow through the device is critical for maintaining the proper temperature range. Fans in the chassis draw air in through the front bezel and through the device. The airflow ventilates out from the right side (front view).
Mounting the device

To mount the device in a rack:
1. Using both hands, grasp the outside corners of the plastic front bezel and slowly pull to detach it from the device and expose the mounting holes.

![Figure 2-1: Mounting ProStream 1000](image)

2. Gently slide the device to rest in its place on the rack.
3. Push the device back until the rack-mount holes in the front of the device line up with the rack posts.
4. Insert four screws through the mount holes in the front of the device to go through the corresponding holes on the rack posts.
5. Tighten the screws with a screwdriver.
6. Carefully replace the front bezel of the device, making sure you do not damage the air filters.

Inserting the IOM Cards and RF Input Card

Typically, ProStream 1000 devices are shipped with the IOM cards installed according to the hardware configuration required by the customer.

ESD Guidelines

If you need to install or replace an IOM card, handle it according to the following instructions to avoid any damage.

**CAUTION:** Electrostatic Discharge (ESD) can damage the device components. Take precautions to eliminate ESD from your body and clothes before handling the device or card by using a wrist band and a rubber mat and read the following section.

To prevent damage caused by ESD, follow these instructions:

- When unpacking an IOM card, keep the card in the anti-static wrapping until you are ready to install it in the device. Unwrap the card only at an ESD workstation or when grounded.
- If for any reason you cannot insert the card, lay it in an anti-static container or packaging.
- Handle the card only at an ESD workstation and use an anti-static rubber mat and wrist bands.
- Handle the IOM card with care. Do not touch components and contacts on the board and hold board by its edges.

**Required Hardware to insert an IOM/RF card**

Before you insert an IOM card, have the following at hand:

- Phillips screwdriver to remove the fillers and to fasten the card to its place.
- ESD-preventive wrist band and a rubber mat.

**To insert an IOM/RF card:**

1. Unplug the device to power off.
2. Mount the device into the rack (optional).
3. Remove the filler panel that covers the required IOM slot.
4. Follow the ESD guidelines (see ESD Guidelines) and unpack the IOM card.
5. Hold the card by its edges and insert it into the slot. Make sure that the sides of the card slide into the guides of the IOM slot.
6. Push the card until its edge-connector mates securely with the connector in the slot.
7. Fasten the screws of the card to secure the IOM card to the chassis.
8. If you did not mount the device into the rack, mount it into the rack now.
9. Start cabling the device. See Cabling the ProStream 1000.

**Cabling the ProStream 1000**

Cabling the ProStream 1000 device is very straightforward. All input and output ports as well as Ethernet ports are clearly marked. For further information, refer to ProStream 1000 Back Panel. The following table lists the ports, cables/fibers and the required connectors:

**Table 2-1: Cabling ProStream 1000**

<table>
<thead>
<tr>
<th>Port</th>
<th>Description</th>
<th>Connector</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASI</td>
<td>75 Ohm coax cables</td>
<td>Standard BNC</td>
</tr>
<tr>
<td>GbE</td>
<td>Multimode or singlemode optic fiber or</td>
<td>LC</td>
</tr>
<tr>
<td></td>
<td>Shielded and grounded CAT-6 or CAT-7</td>
<td>RJ-45</td>
</tr>
<tr>
<td>Ethernet</td>
<td>Shielded and grounded CAT-5E</td>
<td>RJ-45</td>
</tr>
</tbody>
</table>

**Connecting the Ethernet Cables**

The Ethernet ports, labeled ETH2 and ETH3, provide access to two independent networks. All ProStream 1000 devices use the ETH3 port to connect to a management network. The ETH2 port is used to connect the ProStream 1000 to a CAS (Conditional Access) network. ETH1 is currently not in use.

**To connect the Ethernet ports:**

- Connect a shielded and grounded CAT-5E cable from the ETH2 and ETH3 ports on the ProStream 1000 device to your network hub or switch.
Connecting the ASI Input/Output Ports

The ASI ports require a 75-Ohm cable with a standard BNC connector.

To connect the ASI ports:
1. Connect the BNC male connector to the BNC female connector of the required ASI port located on the ProStream 1000 back panel.
2. Connect the connector on the other side of the cable to your ASI source/destination.

Connecting the GbE Input/Output Ports

The GbE connection requires SFP modules and either of the following:
- Optic fiber with standard LC connectors.
- Shielded and grounded CAT-6 or CAT-7 cable (copper cable) with RJ-45 connector.

The SFP modules should be purchased separately. For further information about SFP modules, see SFP Module.

To connect fiber optic/copper cables to the ProStream 1000:
1. Insert the SFP module into the SFP receptacle of the required GbE port at the back of the ProStream 1000.
2. Do either of the following:
   - Fiber cable - Insert the LC connector into the Rx port of the SFP.
   - Shielded and grounded CAT 6 or 7 (copper cable) - Insert the RJ-45 connector into the SFP.
3. Connect the connector on the other side of the fiber to your GbE source/destination (typically a GbE switch).
4. Fiber optic cable only - If you are using a bi-directional network configuration, use another fiber to connect the Tx port of the SFP to the Rx port of the switch.

The following diagrams illustrate a typical case for the ProStream 1000 device connected with a fiber cable or with a copper cable.

![Figure 2-2: Connections with fiber optic cables](image1)

![Figure 2-3: Connection with copper cable](image2)
Connecting the Input 8VSB Modulation Card

The RF ports require a 75 Ohm cable with standard BNC connector.

**To connect the 8VSB ports (RF ports):**

1. Connect the BNC male connector to the BNC female connector of the required RF port located on the ProStream 1000 back panel.
2. Connect the connector on the other side of the cable to your ATSC 8VSB source/destination.

Connecting Power

The encoder is customized with either an AC or DC power supply. Instructions for both are included in this section.

The ProStream 1000 unit is customized with either an AC power supply or a -48VDC power supply. Follow the instruction appropriate to your power supply.

The unit does not have a power switch. The unit powers on automatically when you plug it in.

Before you power-up the device, make sure that you have performed all of the cabling required for each of the optional modules that are installed.

Connecting the AC Power Supply

**Power cord rating**

Harmonic ships the AC power supply of ProStream 1000 with a power cord of the required rating. Customers who choose to use a different cord due to their specific considerations or constraints should use an AC cord that complies with national electrical code and meets the following rating:

- Current rating - 16 Amps or higher
- Wire gauge - 18 AWG or thicker

**CAUTION:** Use the recommended 16A/18AWG cord to ensure your own personal safety and to help protect the device and working environment from potential damage.

- Electro-Static Discharge (ESD) may damage the device components. Take precautions to eliminate ESD from your body and clothes before handling the device or card by using a wrist band and a rubber mat and read the following section.

To prevent damage caused by ESD, remember the following:

- When unpacking an IPC, keep the module in the anti-static wrapping until you are ready to install it in the device. Unwrap the module only at an ESD workstation or when grounded.
- If for any reason you cannot insert the card, lay it in an anti-static container or packaging.
- Handle the card only at an ESD workstation and use anti-static rubber mat and wrist bands.
- Handle the card with care. Do not touch components and contacts on the board and hold the board only by its edges.

**Hardware needed to insert an IPC**

Before you insert an IPC, have the following on hand:

- Phillips screwdriver to remove the fillers and to fasten the card in place.
- ESD-preventing wrist band and a rubber mat.
To insert an IPC:
1. Unplug the device to power off.
2. Dis-mount the device of the rack (optional).
3. Grasp with your hands each side of the device front bezel.
4. Carefully remove the front bezel by pulling it away from the device.
5. Place the front bezel in a safe and easy to access location.
6. Unscrew the screws that attach the front panel to the chassis in a synchronized manner.
7. Hold the front panel handle and pull the panel away from the device to disconnect the front panel connector.
8. Place the front panel in a safe and easy to access location.
9. Follow the ESD guidelines and unpack the card.
10. Hold the card by its edges and insert it into the slot. Make sure that the sides of the card slide into the guides of the IPC slot.
11. Push the card until its edge-connector mates securely with the connector in the slot.

12. Place the front panel in its place on the chassis.
13. Verify that the notches located on both sides of the front panel slide on the brackets jutting from both sides of the chassis. See Figure 5–3.
14. Push the front panel to allow the mating connector to mate securely with the connector on the chassis.
15. Screw the front panel screws.
16. Push the bezel to snap on the chassis.
17. Power up the device.

To replace an IPC:

1. Follow steps 1-8 in the previous procedure (To insert an IPC).
2. Locate the card to be replaced.
3. Follow the ESD guidelines and, holding the card by its handle, pull to disconnect it from its mate-connector and then pull it out.

4. Follow the ESD guidelines and pack the card away.
5. Follow the ESD guidelines and unpack the card.
6. Hold the card by its edges and insert it into the slot. Make sure that the sides of the card slide into the guides of the card slot.
7. Push the card until its edge-connector mates securely with the connector in the slot.

8. Place the front panel in its place on the chassis.

9. Verify that the notches located on both sides of the front panel slide on the brackets jutting from both sides of the chassis. See Figure 5-3.

10. Push the front panel to allow the mating connector to mate securely with the connector on the chassis.

11. Screw the front panel screws.

12. Push the bezel to snap on the chassis.

13. Power up the device.
Chapter 3
Initial Device Configuration

This chapter describes how to set initial configuration parameters to the ProStream 1000 device depending on the control mode of the device.

Initial Configuration in NMX control mode

The ProStream 1000 unit ships with the BOOT program preconfigured as follows for operation under NMX:

- **BOOTP enable** - Enables the automatic assignment of a valid IP address by NMX.
- **BOOTP time-out** - (5 seconds) defines the period of time during which the device sends BOOTP requests.

To configure a ProStream 1000 device in an NMX managed network:

1. Launch NMX.
2. Activate a map.
3. Add a ProStream 1000 unit to the map.
4. Enter the name and hardware model in the **Configure ProStream 1000** window.
5. Enter the physical address.
   - The physical address is otherwise known as the MAC address. To obtain the MAC address, do either of the following:
     - Look for a sticker on the back panel under the label **MAC Address for Ethernet port 3**.
     - Use the control panel to view the MAC Address as explained in **Viewing MAC Address**.
6. Enter the Network Address.
   - The network address is the Ethernet 3 IP address to which you want the NMX to assign the ProStream 1000 unit.
7. Enter the default gateway.
8. Enter the subnet mask.
9. Select the desired firmware version.
10. Click **OK**.
11. Reboot the ProStream 1000 unit manually by disconnecting and re-connecting its power inlet.
   - ProStream 1000 broadcasts a BOOTP request. NMX recognizes the ProStream 1000 device according to its physical address and assigns it the following:
     - IP properties as configured.
     - Firmware file path.
     - If the required firmware version matches the version that is currently stored on the hard disc of the device, the device uses the locally stored version to complete the boot process.

**NOTE**: For more details about NMX, refer to the NMX Installation and Startup Guide or the NMX Online Help.
If the required firmware version does not match the version that is currently stored on the hard disk of the device, the device downloads the updated version and completes the boot process.

If ProStream 1000 does not receive a BOOTP response from NMX after the first attempt, it sends additional requests, up to 5 BOOTP requests. The following table lists faults that might occur during initial configuration and the ensuing consequences:

<table>
<thead>
<tr>
<th>Fault</th>
<th>Consequence</th>
</tr>
</thead>
<tbody>
<tr>
<td>No BOOTP response</td>
<td>ProStream 1000 reboots with its previous IP settings and firmware version. In case of a new device, it boots up with the factory settings.</td>
</tr>
<tr>
<td>BOOTP response received, firmware file not found, or no FTP response</td>
<td>ProStream 1000 continues sending BOOTP requests.</td>
</tr>
<tr>
<td>BOOTP response received, TFTP download starts but failed to complete successfully.</td>
<td>ProStream 1000 boots up with the version residing on its hard disk. In case of a firmware mismatch, an alarm is issued.</td>
</tr>
</tbody>
</table>

**NOTE:** During boot up process various messages appear on the control panel. To view these messages, refer to Control Panel Messages. While working in NMX control mode, use the control panel for viewing purposes only. Any attempt to set device properties using the control panel can adversely affect the ProStream 1000 operation.

### Start Using the Device — NMX Control Mode

Once ProStream 1000 boots up successfully, you can use NMX to further configure the device and provision stream through it. For further instructions, refer to NMX Online Help.

### Initial Configuration in Standalone Control Mode

While working in the standalone control mode, you may set the preliminary configuration and control the ProStream 1000 unit via its front panel. This section provides a general review of the control panel and instructs you on how to set network properties via the control panel.

#### Control Panel Overview

The front panel includes a control panel comprised of a Liquid Crystal Display (LCD) and a keypad as described in ProStream 1000 Front Panel.

You can set and view the following network properties using the Control panel of the device:
- IP address
- Mask address
- Default Gateway
- MAC address (view only)
**Control Panel Display**

The 2-line, 20-character local control panel display shows the menus and their parameters. The control panel display comprises two lines:

- **Line 1** - Shows the menu path for the currently selected option as follows: menu: parameter name.
- **Line 2** - Shows a parameter value. The parameters you can change are modified in Edit mode.

![Control Panel Display](image)

**Figure 3-1: Control Panel Display**

The Control panel display has two modes:

- **Navigation** - Enables you to browse through menus and sub-menus.
- **Edit** - Enables you to change the parameter value. A blinking cursor shows the character to be edited.

**Keypad**

The keypad on the local control panel provides several functions. The following table lists the function and the control panel section that provides the function.

<table>
<thead>
<tr>
<th>Function</th>
<th>Control Panel</th>
</tr>
</thead>
<tbody>
<tr>
<td>Access to the menus</td>
<td>Hot Keys</td>
</tr>
<tr>
<td>Navigation through the menu hierarchies</td>
<td>Navigation and Function keys</td>
</tr>
<tr>
<td>Editing capabilities</td>
<td>Alphanumeric keys</td>
</tr>
</tbody>
</table>

The following figure shows the keypad and its sections:

![Control Panel Key Pad](image)

**Figure 3-2: Control Panel Key Pad**
Hot Keys - Includes six keys for accessing various menus. Currently only the NTWK key pad is active. It allows you to set network parameters.

Navigation Keys - The following table lists the Navigation keys and explains their functionality:

**Table 3–3: Navigation Keys Functionality**

<table>
<thead>
<tr>
<th>Button</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up and Down arrows</td>
<td>Navigates through the menus</td>
</tr>
<tr>
<td>Left and Right arrows</td>
<td>Navigates through the menu parameters</td>
</tr>
<tr>
<td>Enter button</td>
<td>Executes the selection of a menu</td>
</tr>
<tr>
<td></td>
<td>Quits an editing session and applies changes</td>
</tr>
<tr>
<td></td>
<td>Shifts to Editing mode</td>
</tr>
</tbody>
</table>

Alphanumeric Keys - Enables you to change the values of the parameters. In addition to the alphanumeric keys, the keypad includes the following keys:

- ESC - Enables you to shift from Editing mode to Navigation without applying the changes.
- SHIFT - Enables you to shift to alphabetical and other symbols by pressing Shift and then the required key. (press the keys consecutively).

**Setting Network Properties**

Before you start working with the device, set the device IP address, subnet mask, and default gateway. To define network settings, use the control panel.

**TIP:** To exit Edit mode without applying changes, press Esc, or any Hot key.

**TIP:** To erase an existing parameter value, press Enter and then press the right arrow to bring you to the right of the value you want to erase. Press Shift, then press the left arrow, character by character until the value is erased.

**TIP:** To enter a space at the insertion point, press Shift and then press the left arrow.

**Validation of Parameter Value**

When editing network settings, a validation mechanism checks the structure and the entered parameters. If it detects an invalid structure or parameter, the following error message appears in the Control panel display:

Invalid [parameter name]

**Setting the IP Address of Management Port**

To set the management port IP address:

1. Press the NTWK hot key.

The display shows

NTWK:Configuration.
2. Press the A or the V button to navigate to NTWK: Control IP.
3. To shift to Edit mode, press Enter.
4. Enter the IP Address using the alphanumeric keys.

**TIP:** To enter a period, press Shift then press the 0/. key.

5. To apply changes and to shift to Navigation mode, press Enter.
   Do not exit the Network menu because you can set other properties from there.

**Setting the Subnet Mask**

To set the subnet mask:

1. Press the A or the V button to navigate to: NTWK: Control Subnet.
2. To shift to Edit mode, press Enter.
3. Enter the subnet mask using the alphanumeric keys.

**TIP:** To enter a period, press Shift then press the 0/. key.

4. To apply and to shift to Navigation mode, press Enter.

**Setting the Default Gateway Address**

To set the gateway address:

1. Press A or V to navigate to NTWK: Gateway.
2. To shift to Edit mode, press Enter.
3. Enter the default gateway using the alphanumeric keys.

**TIP:** To enter a period, press Shift then press the 0/. key.

4. To apply and to shift to Navigation mode, press Enter.

5. Press Esc to exit the Network menu.

**Viewing MAC Address**

To view the MAC address:

1. Press the NTWK hot key.
2. Press A or V to navigate to NTWK: Control MAC.
   The MAC address displays beneath the parameter name.
3. Press Esc to exit the parameter.
Starting to Use the Device - Standalone Control Mode

Once you have configured the ProStream 1000 IP address, use the Web client to further configure the device and provision streams through it. Access to the Web client is restricted and requires valid login information. Two optional access levels are available:

Table 3–4: Standalone Access Level

<table>
<thead>
<tr>
<th>Access Level</th>
<th>Authorized Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monitor</td>
<td>Allows only the monitoring of the operation of the device.</td>
</tr>
<tr>
<td>Configure</td>
<td>Allows configuring the device only via a web client and defining the monitor access level password.</td>
</tr>
</tbody>
</table>

Each access level requires a correct username and password combination. The current access level appears in the upper right corner of the web client page.

Logging into the Device

To log into the device:
1. Start Microsoft Internet Explorer (IE) on a PC that meets the system requirements as listed in System Requirements of Managing PC.
2. In the address bar of IE, type the address of the ProStream 1000.
3. Click the Log In link.
   
The following window appears.

4. Type in the required user name and password.
   
   When logging in for the first time, use the following default passwords.

Table 3–5: Standalone Default Password

<table>
<thead>
<tr>
<th>User Name</th>
<th>Default Password</th>
</tr>
</thead>
<tbody>
<tr>
<td>monitor</td>
<td>monitor</td>
</tr>
<tr>
<td>configure</td>
<td>configure</td>
</tr>
</tbody>
</table>

NOTE: To change a password, refer to the ProStream 1000 Online Help.
5. Selecting the **Save this password in your password list** check box and click **OK**.

It is recommended to not use this option when accessing the Web client as **Configure** and when working from a computer that many users can access.

The Web client opens and you can complete the configuration, provision the device and monitor its operation. For information and explanations about the device configuration, provisioning and monitoring, refer to the ProStream 1000 Online Help.

**NOTE:** After three unsuccessful login trials, or if you forget your password/username, you need to reset your password. To reset the password, call Harmonic customer support.
Chapter 4
Upgrading Firmware

The device is shipped with valid firmware and web client installed. However, the firmware may need to be updated as new features are introduced.

Upgrading Firmware in NMX Control Mode

The firmware upgrade of ProStream 1000 units managed by NMX is done through the NMX Digital Service Manager. Refer to the NMX Online Help for further details. For standalone devices that are managed through the web client, refer to the ProStream 1000 Online Help.

NOTE: Upgrades from version 1.1.1 and up to version 2.0 and up should be done via NMX only. This applies also to devices that previously operated in a standalone mode.
Chapter 5
Maintenance

Air Filters

ProStream 1000 uses two air filters to minimize dust and dirt in the circuitry and components in the chassis. These filters are made of flexible, compressed fiber spun from urethane foam. Installed in the front of the unit, the filters are fire retardant and conform to UL 900 Class II specifications.

The bezel filter (front view) fits on the left side, inside of the front bezel. The following figure shows the dimensions of the bezel filter.

![Bezel Filter Dimensions](image)

Figure 5-1: Bezel Filter Dimensions

The notches on the left side and the cutouts in the middle fit on either side of the front bezel mounting posts.

The keypad filter (front view) sits behind the keypad on the local control panel. The following figure shows the keypad filter.

![Keypad Filter Dimensions](image)

Figure 5-2: Keypad Filter Dimensions

Maintaining the Filters

The operating environment of the device plays a large factor in determining the life of the air filters. Devices that operate in dusty and dirty surroundings require more frequent inspections and filter cleaning than those operating in cleaner environments.

Inspect and clean the filters with a frequency that is appropriate to the environment in which the device operates. Harmonic recommends inspecting and cleaning the filters every six weeks to ensure proper airflow through the chassis.

To clean dust and dirt from the filters, you can use a vacuum to remove the dirt or rinse them in water. You can also use soaps or mild detergents on the filters. If you rinse the filters in water, make sure that you squeeze the excess water from them before reinstalling them in the device. You might need to order replacement filters if the filters become too dirty over time.
Fan Replacement

NOTE: You do not need to turn off the device when removing and replacing the air filters.

Replacing the Bezel Filter

To remove the front left filter from behind the front bezel:
1. Grasp each side of the device’s front bezel with your hands.
2. Carefully remove the front bezel by pulling it away from the device.
3. Remove the filter from inside the front bezel; inspect it for cleanliness.

NOTE: When new, the color of the filter is medium charcoal. As dust and dirt collect in the porous filter material, the filter’s color gradually changes to brown, then an ash color.

4. Clean the filter if necessary.
5. Replace the filter inside the front bezel.
   Place the filter so that the long horizontal slot is at the bottom edge. Carefully place the cutouts in the filter around the bezel mounting posts.
6. Carefully replace the front bezel on the device making sure the filter does not fall out of the bezel.

Replacing the Keypad Filter

To remove the air filter behind the keypad:
1. Grasp each side of the device front bezel with your hands.
2. Carefully remove the front bezel by pulling it away from the device.
   Note the location of the filter. The keypad is screwed onto the front of the device through four mounting posts. Cutouts on the filter wrap around the four posts, and the right side of the filter extends past the keyboard.
3. Remove the filter by pulling the left side of the filter up and away from the keyboard mounting posts, then pulling up the right side.
4. Inspect the air filter for dirt and clean it if necessary.
5. Replace the air filter by inserting the right side of the filter behind the keypad, with the vertical slots around the mounting posts.
6. Insert the left side of the filter, placing the horizontal cutouts around the mounting posts.
7. Carefully replace the front bezel on the encoder making sure the filter does not fall out of the bezel.

Fan Replacement

NOTE: This section applies to ProStream 1000 with a removable front panel. For details see, ProStream 1000 Device Types.

The ProStream 1000 device uses six fans to control the temperature of the device during operation. The fans are mounted on the back of the front panel and are an integral part of the front panel. In case of a fan failure, hot swap the front panel as instructed below.

NOTE: A failure of a single fan, requires the replacement of the fan module.
Removing and Replacing the Fans

The design of the device allows a quick hot swap of the fans. Removing and replacing the fans does not affect the device operation and should last not more than two minutes. If it exceeds two minutes, the device may be damaged.

Preparation

To remove and replace the fans, you need the following:

- Phillips screwdriver.
- A new front panel.

To remove and replace a fan:

1. Grasp with your hands each side of the device front bezel.
2. Carefully remove the front bezel by pulling it away from the device.
3. Place the front bezel in a safe and easy to access location.
4. Unscrew the front panel screws.
5. Hold the front panel handle and pull the module away from the device to disconnect the front panel connector.
6. Place the new front panel in its place on the chassis.
7. Verify that the notches located on both sides of the front panel slide on the brackets jutting from both sides of the chassis.
8. Push the front panel to allow the mating connector to mate securely with the connector on the chassis.
9. Screw the front panel screws to the working device.
10. Push the bezel to snap on the chassis.
11. Verify that the alarm Fan Failure is remitted.

Figure 5–3: ProStream 1000 Chassis with Notches and Front Panel Connector
Fuse Replacement

The device uses a slow blow 3.15A, 250V fuse, 5 x 20mm. The fuse is located on the back panel beside the power input. A spare fuse is located in the fuse cover.

![ProStream 1000 Fuse](image)

Figure 5-4: ProStream 1000 Fuse

Replacing the Fuse

**CAUTION:** Always replace the fuse with a fuse of the same rating and type. Using a different fuse voids the Harmonic warranty and could result in fire or other electrical damage.

**To replace the fuse:**

**CAUTION:** You must disconnect the power cord before removing the fuse.

1. Unplug the power cord from the chassis.
2. Pull down the fuse cover on the back panel.
3. Remove the old fuse.
4. Install the new fuse.
5. Replace the fuse cover.
6. Plug in the power cord.
Appendix A

Contacting the Technical Assistance Center

Harmonic Global Service and Support has many Technical Assistance Centers (TAC) located globally, but virtually co-located where our customers can obtain technical assistance or request on-site visits from the Regional Field Service Management team. The TAC operates a Follow-The-Sun support model to provide Global Technical Support anytime, anywhere, through a single case management and virtual telephone system. Depending on time of day, anywhere in the world, we will receive and address your calls or emails in one of our global support centers. The Follow-the-Sun model greatly benefits our customers by providing continuous problem resolution and escalation of issues around the clock.

Report an issue online at:

Appendix B
Safety and Regulatory Compliance Information

Legal Disclaimer: Information in this document is provided in connection with Harmonic products. Unless otherwise agreed in writing Harmonic products are not designed nor intended for any application in which the failure of the product could cause personal injury or death.

NOTE: The information in this appendix may apply to purchased products only.

Important Safety Instructions

This section provides important safety guidelines for operators and service personnel. Specific warnings and cautions are found throughout the guide where they apply, but may not appear here. Please read and follow the important safety information, noting especially those instructions related to risk of fire, electric shock or injury to persons. You must adhere to the guidelines in this document to ensure and maintain compliance with existing product certifications and approvals. In this document, we use “product,” “equipment,” and “unit” interchangeably.

This equipment generates, uses, and can radiate radio frequency energy. It may cause harmful interference to radio communications if it is not installed and used in accordance with the instructions in this manual. Operation of this equipment in a residential area is likely to cause harmful interference if this occurs, the user will be required to correct the interference at his or her own expense.

In event of conflict between the information in this document and information provided with the product or on our website for a particular product, this product documentation takes precedence.

Safety Symbols & Translated Safety, Warning & Caution Instructions (English)

To avoid personal injury or property damage, before you begin installing or replacing the product, read, observe, and adhere to all the following safety instructions and information. Harmonic products and/or product packaging may be marked with the safety symbols used throughout this document, when it is necessary to alert operators, users, and service providers to pertinent safety instructions in the manuals.

| ![Warning Symbol] | **Installing or Replacing the Product Unit Warning**  
- Only trained and qualified service personnel should be allowed to install, replace, or service this unit (refer AS/NZS 3260 Clause 1.2.14.3 Service Personnel).  
- Read the installation instructions before connecting the system to the power source.  
- When installing or replacing the unit, always make the ground connection first and disconnect it last.  
- Installation of the unit must comply with local and national electrical codes.  
- This unit is intended for installation in restricted access areas. A restricted access area can be accessed only through the use of special tool, lock and key or other means of security.  
- Use only specified replacement parts.  
- Do not use this unit in or near water. Disconnect all AC power before installing any options or servicing the unit unless instructed to do so by this manual. |
| ![Warning Symbol] | **Rack Mount Warning**  
- To prevent bodily injury when mounting or servicing this unit in a rack, special precautions must be taken to ensure your safety and stability of system:  
  - Conform to local occupational health and safety requirements when moving and lifting the equipment.  
  - Ensure that mounting of the unit by mechanical loading tools should not induce hazardous conditions.  
  - To avoid risk of potential electric shock, a proper safety ground must be implemented for the rack and each piece of equipment installed on it. |
| ![Warning Symbol] | **Chassis Warning**  
- Before connecting or disconnecting ground or power wires to the chassis, ensure that power is removed from the DC circuit.  
- To prevent personal injury or damage to the chassis, lift the unit only by using handles that are an integral part of the chassis, or by holding the chassis underneath its lower edge.  
- Any instructions in this guide that require opening the chassis or removing a board should be performed by qualified service personnel only.  
- Slots and openings in the chassis are provided for ventilation. Do not block them. Leave the back of the frame clear for air exhaust cooling and to allow room for cabling - a minimum of 6 inches (15.24 cm) of clearance is recommended. |
### Electric Shock Warning

- This unit might have more than one power cord. To reduce the risk of electric shock, disconnect the two power supply cords before servicing the unit.
- Before working on a chassis or working near power supplies, unplug the power cord on AC units.
- Do not work on the system or connect or disconnect cables during periods of lightning activity.
- This unit is grounded through the power cord grounding conductor. To avoid electric shock, plug the power cord into a properly wired receptacle before connecting the product input or outputs.
- Route power cords and other cables so that they are not likely to be damaged. Disconnect power input to unit before cleaning. Do not use liquid or aerosol cleaners; use only a damp cloth to clean chassis.
- Dangerous voltages exist at several points in this product. To avoid personal injury, do not touch exposed connections and components while power is on. Do not insert anything into either of the system's two power supply cavities with power connected.
- Never install an AC power module and a DC power module in the same chassis.
- Do not wear hand jewelry or watch when troubleshooting high current circuits, such as the power supplies.
- To avoid fire hazard, use only the specified correct type voltage and current ratings as referenced in the appropriate parts list for this unit. Always refer fuse replacement to qualified service personnel.
- This unit relies on the building's installation for short-circuit (overcurrent) protection. Ensure that a fuse or circuit breaker no larger than 120 VAC, 15A U.S. (240 VAC, 10A international) is used on the phase conductors (all current-carrying conductors).
- To avoid electrocution ensure that the rack has been correctly grounded before switching on the unit. When removing the unit remove the grounding connection only after the unit is switched off and unplugged.

### Electrostatic Discharge (ESD) Caution

- Follow static precaution at all times when handling this unit.
- Always wear an ESD-preventive wrist or ankle strap when handling electronic components. Connect one end of the strap to an ESD jack or an unpainted metal component on the system.
- Handle cards by the faceplates and edges only; avoid touching the printed circuit board and connector pins.
- Place any removed component on an antistatic surface or in a static shielding bag.
- Avoid contact between the cards and clothing.
- Periodically check the resistance value of the antistatic strap. Recommended value is between 1 and 10 mega-ohms (Mohms).

<th>Installation ou remplacement de l'unité de produit Avertissement</th>
</tr>
</thead>
</table>
| Avertissement | - Il est vivement recommandé de confier l'installation, le remplacement et la maintenance de ces équipements à des personnels qualifiés et expérimentés. (voir AS / NZS 3260 article 1.2.14.3 du personnel de service).  
- Avant de brancher le système sur la source d'alimentation, consulter les directives d'installation.  
- Lors de l'installation ou le remplacement de l'appareil, la mise à la terre doit toujours être connectée en premier et déconnectée en dernier.  
- L'équipement doit être installé conformément aux normes électriques nationales et locales.  
- Cet appareil est à installer dans des zones d'accès réservé. Ces dernières sont des zones auxquelles seul le personnel de service peut accéder en utilisant un outil spécial, un mécanisme de verrouillage et une clé, ou tout autre moyen de sécurité.  
- Utilisez uniquement des pièces de rechange spécifiées.  
- Ne pas utiliser ce produit dans l'eau ni à proximité de l'eau. Débrancher toutes les prises d'alimentation secteur avant d'installer des options ou d'effectuer l'entretien de l'unité, à moins d'instructions contraires dans le présent manuel. |
| Avertissement | Rack Monture Avertissement  
Pour éviter les blessures corporelles lors du montage ou l'entretien de cet appareil dans un rack, des précautions particulières doivent être prises pour assurer votre sécurité et la stabilité du système:  
- Conformez-vous aux exigences de médecine du travail et de sécurité lorsque vous déplacez et soulevez le matériel.  
- Assurez-vous que le montage de l'appareil par des outils de chargement mécaniques ne doit pas induire des conditions dangereuses.  
- Pour éviter tout risque d'électrocution, le rack et chaque élément de l'équipement installé dans le rack doivent être correctement reliés à la terre. |
| Avertissement | Châssis Avertissement  
- Avant de connecter ou de déconnecter les câbles d'alimentation (pôles et terre) du châssis, vérifiez que le circuit de courant continu est hors tension.  
- Pour éviter toute blessure ou des dommages au châssis, soulevez l'unité uniquement par les poignées du châssis lui-même ou en portant celui-ci par le bord inférieur.  
- Toutes les opérations du présent guide nécessitant l'ouverture du châssis ou le retrait d'une carte doivent être uniquement effectuées par du personnel d'entretien qualifié.  
- Le châssis est muni de fentes et d'ouvertures d'aération. Ne pas les bloquer. Dégager l'arrière du cadre pour permettre le refroidissement de l'évacuation d'air et laisser de la place au câblage; un dégagement d'au moins 15.24 cm (6 po) est recommandé. |

<td>Ne pas travailler sur le système ni brancher ou débrancher les câbles pendant un orage.</td>
</tr>
<tr>
<td></td>
<td>Ce unité est mis à la terre par le conducteur de protection intégré au cordon d'alimentation. Pour éviter les chocs électriques, brancher le cordon d'alimentation dans une prise correctement cable avant de raccorder les entrées ou sorties du unité.</td>
</tr>
<tr>
<td></td>
<td>Installer les cordons d'alimentation et autres cables de sorte qu'ils ne risquent pas d'être endommagés. Couper l'alimentation avant nettoyage. Ne pas utiliser de nettoyant liquide ou en aérosol; utiliser seulement un linge humide.</td>
</tr>
<tr>
<td></td>
<td>Des courants électriques dangereux circulent dans cet appareil. Afin d'éviter les lessures, ne pas toucher les connexions et composants exposés lorsque l'appareil est sous tension. Ne rien insérer dans l'une ou l'autre des cavités des prises de courant du système lorsque l'appareil est sous tension.</td>
</tr>
<tr>
<td></td>
<td>N'installez jamais un module d'alimentation AC et un module d'alimentation DC dans le même châssis.</td>
</tr>
<tr>
<td></td>
<td>Ne pas porter de bijoux aux mains ni de montre durant le dépannage des circuits à haute tension, comme les transformateurs.</td>
</tr>
<tr>
<td></td>
<td>Pour prévenir les risques d'incendie, n'utiliser que le type, la tension et le courant nominal spécifiés dans la nomenclature des pièces de ce unité. Toujours confier le remplacement des fusibles à du personnel d'entretien qualifié.</td>
</tr>
<tr>
<td></td>
<td>Pour ce qui est de la protection contre les courts-circuits (surtension), ce produit dépend de l'installation électrique du local. Vérifier qu'un fusible ou qu'un disjoncteur de 120 V alt., 15 A U.S. maximum (240 V alt., 10 A international) est utilisé sur les conducteurs de phase (conducteurs de charge).</td>
</tr>
<tr>
<td></td>
<td>Pour éviter l'électrocution, assurez-vous que le rack a bien été mis à la terre avant de mettre l'unité en marche. Lors du retrait de l'unité, retirer le raccordement de terre seulement après avoir mis l'unité à l'arrêt et l'avoir débranchée.</td>
</tr>
</tbody>
</table>
Les décharges électrostatiques (ESD) Attention
- Respecter systématiquement les précautions relatives aux charges électrostatiques durant la manipulation de cet unité.
- Portez toujours un poignet ou la cheville bracelet antistatique préventive lors de la manipulation des composants électroniques. Branchez une extrémité de la sangle à une prise ESD ou d'un composant métallique non peinte sur le système.
- Manipulez les cartes en les faces avant et les bords seulement; éviter de toucher la carte de circuit imprimé et les broches du connecteur.
- Placer un composant retiré sur une surface antistatique ou dans un sac de protection statique.
- Éviter tout contact entre les cartes et les vêtements.
- Vérifier périodiquement la valeur de résistance de la sangle antistatique. Valeur recommandée est comprise entre 1 et 10 méga-ohms (Mohms).

Rayonnement laser Attention
- Rayonnement laser invisible peut être émis à partir de fibres ou les connecteurs débranchés. Ne pas regarder en faisceaux ou regarder directement avec des instruments optiques. Ne jamais faire fonctionner une unité en cas de bris d'une fibre ou de séparation d'un connecteur de fibre.

Batterie au lithium Manipulation instructions de sécurité
- Perchlorate pour la Californie Consultatif: Certaines batteries au lithium, peuvent contenir du perchlorate, le texte qui suit consultatif est prévu: "Présence de perchlorate - une manipulation spéciale peut s'appliquer, voir: www.dtsc.ca.gov/hazardous waste/perchlorate/ for information".

Il y a danger d'explosion si la batterie est remplacée de manière incorrecte ou par une batterie de type incorrect.
- Mettre au rebut les batteries usagées conformément aux instructions du fabricant.
- Les batteries des produits Harmonic ne peuvent pas être réparées ni entretenues par l'utilisateur. Ne confier l'entretien des batteries remplaçables qu'à du personnel compétent de Harmonic.

Site Preparation Instructions

**NOTE:** Only trained and qualified service personnel (as defined in IEC 60950 and AS/NZS 3260) should install, replace, or service the equipment. Install the system in accordance with the U.S. National Electric Code if you are in the United States.

**To prepare the site for installation:**

1. **Preparing and Choosing a Site for Installation**
   - To ensure normal system operation, plan your site configuration and prepare the site before installation.

---

### Vorsicht

**Elektrostatische Entladung (ESD) Vorsicht**

- Folgen Sie statische vorsorglich zu jeder Zeit beim Umgang mit diesem Gerät.
- Hand Karten nur durch die Faceplates und Kanten; Berühren Sie die bedruckte Leiterplatte und Steckerstifte.
- Legen Sie alle entfernten Komponenten auf eine antistatische Oberfläche oder in einem Statik-Beutel.
- Kontakt zwischen den Karten und Kleidung vermeiden.
- Den Widerstandswert der gegen statische Gurt in regelmäßigen Abständen überprüfen. Empfohlener Wert ist zwischen 1 und 10 Mega-Ohm (MΩhm).

### Warnung

**Laserstrahlungen Warnung.**

**Lithium-Batterie Handhabung Sicherheitshinweise**

- Bei Einsetzen einer falschen Batterie besteht Explosionsgefahr
- Entsorgen Sie die benutzten Batterien nach den Anweisungen des Herstellers.
- Es gibt keine zu wartenden Akkus im Harmonic Produkte. Siehe Harmonic qualifiziertes Personal, um die austauschbare Batterien Service
Site Preparation Instructions

2. Creating a Safe Environment
- Install the unit in a restricted access area.
- Choose a site with a dry, clean, well-ventilated and air-conditioned area.
- Choose a site that maintains an ambient temperature of 32 to 104°F (0 to 40°C)

3. Rack Mounting the Unit
- Install the system in an open rack whenever possible. If installation in an enclosed rack is unavoidable, ensure that the rack has adequate ventilation.
- Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips). This unit should be mounted at the bottom of the rack if it is the only unit in the rack.
- When mounting this unit in the partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack.
- If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack.
- The rack must be anchored to an immovable support to prevent it from tipping when the unit is mounted on it. The rack must be installed according to the rack manufacturer's instructions.
- Disconnect all power and external cables before lifting the unit. Depending on the weight of the unit, more than one person might be required to lift it.

4. Power Considerations
   a. AC Power
      - Adding to the system a UPS (Uninterrupted Power Supply) and an AVR (Automated Voltage Regulator) is highly recommended.
      - Installing the main power supply by a qualified electrician, according to power authority regulations. Make sure all powering are wired with an earth leakage, according to local regulations.
      - It is recommended to install the encoder within 1.5m (approximately 5 feet) from an easily accessible grounded AC outlet.
      - When the encoder is rack-mounted, ensure that the rack is correctly grounded.
   b. DC Power
      - Ensure a suitable overcurrent device is in-line between the equipment and the power source.
      - Connect DC-input power supplies only to a DC power source that complies with the safety extra-low voltage (SELV) requirements in the UL60950-1, CAN/CSA-C22.2 No. 60950-1-03, AS/NZS 60950-1, EN/IEC 60825-1, 21 CFR 1040, EN 60950-1, and IEC 60950-1 standards.
      - Ensure that power is removed from the DC circuit before installing or removing power supplies

5. Handling Fiber Channel Cables
   - Always read and comply with the handling instructions on the shipping container.
Follow all ESD precautions and approved fiber cleaning procedures.

The fiber is made of a very pure, expensive glass and should be treated with great care. Handle fibers only in areas that are very clean and do not contain sharp objects.

Wear finger cots or gloves as dirt and oils can damage the fiber and contaminate connectors.

Do not allow kinks or knots to develop in the fiber. If tangles occur, carefully work out the tangles avoiding pulling or bending the fibre beyond its bend radius.

Always use the correct tools for stripping and cleaving the fiber. It will save time and reduce breakage caused by scratches.

If you must secure a bundle of fiber cables together, avoid plastic and metal tie wraps; secure with Velcro instead.

6. Disposing of the Unit
   Dispose of the unit and its components (including batteries) as specified by all national laws and regulations.

Product End-of-Life Disassembly Instructions

For disassembly instructions, please call the technical support in order to remove components requiring selective treatment, as defined by the EU WEEE Directive (2012/19/EU). See Contacting the Technical Assistance Center.

Product Disassembly Process

To disassemble equipment:
1. Disassemble equipment at a dedicated area only, gather the needed tools for disassembly.
2. Remove covers, housing, etc.
3. Remove and separate sub-assemblies (i.e. cables, metals, displays, fans, etc.).
4. Separate hazardous materials from the remainder of the material.
   a. Sort hazardous materials into their different types (i.e., batteries, hazardous liquids, hazardous solids, fiberglass, etc.).
   b. Proceed with hazardous waste management processes only.
5. Identify re-usable materials/sub-assemblies and separate these from the rest of the material.
6. Identify and separate recyclable materials as per below examples:
   a. Scrap material to be sent to smelter(s).
   b. E-waste such as displays, CPU’s, cables and wires, hard drives, keyboards, etc.
   c. Metals such as steel, brass, and aluminum.
   d. Plastics such as fan casings, housings, covers, etc.
   e. Fiber optics and plastic tubing not containing electrical or data wiring.

Safety Rules (English)

Recycle personnel are to wear personal protective equipment including proper eye protection, proper hand protection, and proper breathing protection if needed.

Recycle personnel shall be experienced with using the proper tools required for disassembling equipment. Untrained personnel shall not disassemble Harmonic products. Unfamiliarity with tools can cause damage and injury.
Règles de sécurité (French)

Le personnel du recycleur doit porter de l'équipement de protection individuelle, y compris des lunettes, des gants et un masque de protection appropriés au besoin.

Le personnel du recycleur doit avoir de l'expérience des outils de démontage de l'appareil. Les produits Harmonic ne doivent pas être démontés par du personnel non qualifié. Une mauvaise connaissance des outils peut causer des dommages et des blessures.

EU Manufacturer’s Declaration of Conformity

This equipment is in compliance with the essential requirements and other provisions of Directives 73/23/EEC and 89/336/EEC as amended by Directive 93/68/EEC.

**NOTE:** For specifics, about which standards have been applied, refer to the Declaration of Conformity of the product on Harmonic website at [Product Regulatory Compliance](https://www.harmonicinc.com/regulatory) or contact Harmonic Compliance Team at regulatory.compliance@harmonicinc.com

Electromagnetic Compatibility Notices - Class A

a. FCC Verification Statement (USA)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case users will be required to correct the interference at their own expense.

Connections between the Harmonic equipment and other equipment must be made in a manner that is consistent with maintaining compliance with FCC radio frequency emission limits. Modifications to this equipment not expressly approved by Harmonic may void the authority granted to the user by the FCC to operate this equipment and you may be required to correct any interference to radio or television communications at your own expense.

b. ICES-003 Statement (Canada)

**English:** This Class A digital apparatus complies with Canadian ICES-003.

**French:** Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

c. CE Declaration of Conformity (European Union)

This product has been tested in accordance too, and complies with the Low Voltage Directive (2014/30/EU) and EMC Directive (2014/35/EU). The product has been marked with the CE Mark to illustrate its compliance.
d. VCCI Class A Warning (Japan)

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラスA 情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されることがあります。

English translation of the notice above:
This is a Class A product based on the standard of the Voluntary Control Council for Interference (VCCI) from Information Technology Equipment. If this equipment is used in a domestic environment, it may cause radio interference. When such trouble occurs, the user may be required to take corrective actions.

e. BSMI EMC Notice (Taiwan)

警告使用者：
這是甲類的資訊產品，在居住的環境中使用時，可能會造成射頻干擾，在這種情況下，使用者會被要求採取某些適當的對策

English translation of the notice above:
This is a Class A Information Product, when used in residential environment, it may cause radio frequency interference, under such circumstances, the user may be requested to take appropriate counter measures.

f. Class A Warning (Korea)

주의 A급 기기 이 기기는 업무용으로 전자파 적합 등록을 한 기기이 오니 판매자 또는 사용자는 이 점을 주의하시기 바라며 만약 잘못 판매 또는 구입하였을 때에는 가정용으로 교환하시기 바랍니다.

English translation of the notice above:
This is a Class A device and is registered for EMC requirements for industrial use. The seller or buyer should be aware of this. If this was sold or purchased by mistake, it should be replaced with a residential-use type.

g. Class A Statement (China)

中华人民共和国“A类”警告声明

声明
此为A级产品，在生活环境，该产品可能会造成无线电干扰。在这种情况下，可能需要用户对其干扰采取切实可行的措施。

English translation of the notice above:
When labeled with the CCC marking, the product meets the applicable safety and EMC requirements for China. This is a Class A product. In a domestic environment this product may cause radio interference, in which case the user may be required to take adequate measures.

h. Class A Warning – CISPR 22 (AS/NZS)

Warning (English)

This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

Attention (French)

Il s’agit d’un produit de classe A. Dans un environnement local, ce produit peut entraîner des perturbations radioélectriques, auquel cas l’utilisateur devra éventuellement prendre des mesures adéquates.

Product Regulatory Compliance

Harmonic products are typically tested to the latest safety and electromagnetic compatibility (EMC) specifications and test methods, and are marked with one or more of the following regulatory/certification markings. Some of the certification markings will vary depending on what certifier was used to obtain a certification.

Please visit Harmonic Product Regulatory Compliance page to view information on applied safety & EMC standards and regulatory marks on Harmonic products. You can also email us at regulatory.compliance@harmonicinc.com for assistance on regulatory compliance for Harmonic products.

Appendix B Safety and Regulatory Compliance Information

Product Environmental Compliance

Harmonic manufactures high quality and innovative IT and telecommunications equipment, video delivery infrastructure solutions and services for its customers worldwide. Harmonic is committed to providing our customers with safe and environmentally friendly products that are compliant with all relevant regulations, customer specifications, and environmental legislation, including the directives described below.

EU RoHS

In July 2006, the European Union’s (EU) Directive (2002/95/EC) on the Restriction of the use of certain Hazardous Substances (RoHS) in Electrical and Electronic Equipment (EEE) went into effect, and in July, 2011, the European Union’s RoHS Recast Directive (2011/65/EU) also known as RoHS II entered into force.

Harmonic understands the environmental risks associated with the substances covered by the RoHS Directive and has committed to eliminating or reducing the use of these, as well as other environmentally sensitive substances in our products. Harmonic also continues to comply with the requirements under RoHS II.

For more information, please visit EU RoHS directive page at official EU website.

Restricted Substance Statement

Harmonic products contain less than the permitted limits for the six restricted substances except where exemptions published in the RoHS2 Directive are applicable. This statement is based on vendor-supplied analysis or material certifications, and/or lab test results of the component raw materials used in the manufacture of Harmonic products.

Table B-2: Restricted Substances

EU REACH

Harmonic supports the basic aim of REACH in improving the protection of human health and environment through the better and earlier identification of intrinsic properties of chemical substances. Harmonic products are considered “articles” under REACH; therefore, we are required to provide recipients of our products with information on Substance of Very High Concern (SVHC) present in concentration above 0.1% (w/w).

Substances in our products are not intended to be released under normal or reasonably foreseeable conditions of use; therefore, the registration requirement in REACH Article 7(1) does not apply to our products.

For more information, please visit REACH regulation page at official EU website.

http://ec.europa.eu/environment/chemicals/reach/reach_en.htm

China RoHS

China’s regulation on restriction of the use of certain hazardous substances commonly (China RoHS), is applicable to all Electronic and Information Products (EIPs) and parts sold in China after March 01, 2007. China RoHS regulation restricts the use of the same six substances as the European Union’s ROHS, but has requirements for product labeling and regulated substance information disclosure.

Harmonic complies with China RoHS Phase I for labeling and information disclosure requirements and continues to monitor new developments in China RoHS Phase II towards substance restriction and certification program.

For more information, please visit China RoHS regulation page at official US export website.

http://www.export.gov/china/doingbizinchina/

China RoHS Disclosure Report

O: 表示在该部件的所有均质材料中，此类有毒有害物质的含量均小于 SJ/T11363-2006 标准所规定的限量。
O: Indicates the content of the toxic and hazardous substances at the homogeneous material level of the parts is below the limit defined in SJ/T11363 2006 standard.

X: 表示至少在该部件的某一均质材料中，此类有毒有害物质的含量超过 SJ/T11363-2006 标准规定的限量。
X: Indicates that the content of the toxic and hazardous substances in at least one of the homogeneous materials of the parts is above the limit defined in SJ/T11363 2006 standard.

**Other RoHS and REACH type Regulations**

Harmonic will comply with RoHS and REACH type regulations evolving in other countries, if they become relevant to our products or in markets where we sell our products.
Waste Electrical and Electronic Equipment (WEEE)

European Parliament and the Council of the European Union’s WEEE Directive (2002/96/EC) came into force on August, 2005 and, were more recently amended in July, 2012. This directive encourages the reuse, recycling, and recovery of WEEE and to improve the environmental performance of all operators involved in the life cycle of electrical and electronic equipment, especially those dealing with WEEE. Harmonic ensures that all requirements for registration, reporting, design and data tracking are complied with to meet the objectives of the WEEE directive.

For more information, please visit WEEE directive page at official EU website.

Battery Directive

In September 2006, the European Union’s Directive 2006/66/EC (Battery Directive) came into force with an aim to prohibit the sale of batteries and accumulators containing hazardous substances and to set rules and promote collection, treatment, recycling and disposal of waste batteries and accumulators. This directive applies to spent batteries collected together with WEEE and requires their removal and separate collection. Once removed from WEEE, spent batteries are governed by the Battery Directive. Harmonic uses lithium batteries in its products and our responsibility under the Battery Directive is taken care of under our WEEE Take-Back program.

For more information, please visit Batteries and Accumulators directive page at official EU website.

http://ec.europa.eu/environment/waste/batteries/

Harmonic is committed to manufacturing environmentally safe products for the community, and will make reasonable efforts and required adjustments to its practices, if necessary, to comply with various environmental directives and industry initiatives on the elimination of hazardous substances, labeling, marking, certification and registration as required in markets where we sell our products.

Download Harmonic’s Environmental Compliance Statement at the following location:

WEEE Take-Back Request Program

In order to assist EU member states to preserve, protect and improve the quality of the environment, protect human health and utilize natural resources prudently and rationally, Harmonic strives to recycle in compliance with the WEEE Directive any of its products that cannot be re-used.

Harmonic’s customers should:

- Not discard equipment in household or office garbage
- Arrange proper recycling of unneeded equipment. For the take-back of Harmonic equipment, customers must:
  - Collect the information required to complete Harmonic's WEEE Take-Back Request form
  - Complete and submit the online WEEE Take-Back Request form. Please note that forms must be fully completed in order to prevent process delays
  - Receive instant online confirmation indicating the reference number
  - Receive the End of Life (EOL) asset return authorization number and instruction for EOL asset return
Not ship EOL product to Harmonic without a Harmonic-provided EOL asset return authorization number

The crossed-out wheeled bin symbol on a Harmonic-branded commercial product indicates that the product should not be disposed of along with municipal waste, but invites our customers to return the product to us under Harmonic’s WEEE Take-Back program for product disposal.

Harmonic will pay for the cost of shipping and will provide a Certificate of Recycling or a Certificate of Destruction upon request. For more information on collection, reuse and recycling or to initiate the WEEE take-back process, please complete the form at http://www.harmonicinc.com/webform/weee-takeback-request or contact Harmonic Technical Assistance Center (TAC) or email RMA team at rma.emea@harmonicinc.com.

**Compliance with additional country specific environmental, safety and EMC standards:**

In addition to above listed standards and compliance regulations, Harmonic products may also be compliant with other country specific environmental, safety and EMC requirements. Please contact Harmonic Compliance Team at regulatory.compliance@harmonicinc.com or your local sales representative for more information about compliance with particular country or standard.
This appendix contains a detailed list of the physical and environmental characteristics of the ProStream 1000 device.

Appendix D
Control Panel Messages

Control Panel Messages

During boot up process, various messages appear on the control panel display. The messages indicate the progress of the boot up process. The following sections describe the messages that you can see during successful and unsuccessful boot attempts.

NOTE: During the boot sequence, do not press any key on the keypad.

Successful Boot

The following sequence describes the display on the LCD at startup during a successful boot:

NMX Control Mode

- Power on
  MAC Address
  System loading...
- Booting
  Boot from network
  Loading xx.xx.xx.xxx
- Finished
  HARMONIC ProStream 1000
  WWW.HARMONICINC.COM

Usually, the LCD display shows the device name and Harmonic’s web site address as appears at the end of a successful boot process.

Standalone Control Mode

- Power on
  MAC Address
  System loading...
- Booting
  Boot from Hard Ware
  Boot Attempt 5
  MAC Address
  IP Address
- Finished
  HARMONIC ProStream 1000
  WWW.HARMONICINC.COM

Unsuccessful Boot

A failed network boot ends with the following message:
Error loading from net
Reset

At this point the device resets itself and starts the boot process again.

**Additional Messages of the Control Panel**

If you reset or zap the device, the local control panel displays messages for these actions:

**Resetting ProStream 1000** - When you reset ProStream 1000 from the NMX, the following message appears on the LCD display:

- Boot from HD
- Loading xx.xx.xx.xxx

**Zapping ProStream 1000** - When you zap ProStream 1000 from the NMX, the following message appears on the LCD display:

- Boot from network
- Loading xx.xx.xx.xxx
Appendix E

Wiring the -48VDC Power Supply

If your ProStream 1000 uses a -48 VDC power supply, follow these steps to wire the power supply.

Getting Started

Before you begin wiring the -48 VDC power supply, make sure that you have available the necessary overcurrent protection, wires, and power connector.

Power Source Specifications

The DC power source feeding the ProStream 1000 device must meet the following requirements:

- Electrically isolated from any AC power source
- Positive ground. The Positive bus of the DC power source must be reliably connected to the Ground bus.

Each feed-pair must provide a continuous supply of power that meets the following specifications:

Table E-1: DC Power Source Specifications

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voltage</td>
<td>36 to 75 VDC</td>
</tr>
<tr>
<td>Max. operating current</td>
<td>4 amps</td>
</tr>
<tr>
<td>Max. input surge current</td>
<td>35 amps</td>
</tr>
</tbody>
</table>

Overcurrent Protection

To provide overcurrent protection:
1. Provide overcurrent protection devices for each rack housing ProStream 1000 devices.
2. Place a readily accessible disconnect device between the DC power source and the ProStream 1000.
3. Use a 10-amp double-pole fast trip, DC-rated disconnect device for each DC power connector.

NOTE: Overcurrent protection devices must meet applicable national and local electrical safety codes and be approved for the intended application.

Wiring Requirements

The ProStream 1000 is connected to the DC power source using three wires:

- -Vin
- GND
- +Vin
Although Harmonic provides the power input connector with the ProStream 1000 device, you must supply the wires.

The wires to be used must comply with the following specifications

**Table E-2: Specifications of the DC Power Wires**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Suitable conductor material</td>

<td></td>
</tr>
<tr>
<td>Grounding cable insulation color</td>
<td>Green-yellow</td>
</tr>
</tbody>
</table>

**Power Connector**

The ProStream 1000 is supplied with a special DC power connector plug that matches the DC power socket on the power supply.

This connector is made by Wago, model number 231-103/037-000.

Use only the original connector for connecting the ProStream 1000 to the DC power source. Contact Harmonic Technical Support if you want to use any other type of connector.

**Assembling the DC Input Power Cable**

*To assemble the DC input power cable:*

1. Prepare the power wires as specified in *Wiring Requirements*.
2. Use the disconnect device to make sure that the power supply from the DC power source to the cables is switched off.

**CAUTION:** Turn off the power before proceeding with these instructions.

3. Unpack the power connector.
4. Identify the three wires coming from the DC power source that are used in the connection to the expansion unit:
   - - Vin
   - +Vin
   - GND
5. Strip up to 0.3 inches (8 mm) of insulation from each of the wires coming from the DC power source.
Do not strip more than this length from each wire. Stripping more leaves uninsulated wire exposed outside the DC connector after the assembly is complete.

6. Feed the exposed section of the wires into the matching hole in the DC plug connector according to the following table to match wires with the required holes.

Table E-3: DC Plug Connector Pin Out

</tr>
</tbody>
</table>

Connecting the Power Cable to the ProStream 1000

For this procedure use a Protective Earthing Conductor listed as min. 14 AWG, green/yellow insulation copper wire.

To connect the power cable to the ProStream 1000:

1. Ensure the ProStream 1000 is securely installed in a rack and in a Restricted Access Location only.
2. Connect the 14 AWG rating green-yellow grounding cable with cable terminals to the grounding screw on the ProStream 1000 back panel and to the ProStream 1000 rack as illustrated in the following figure. Make sure to connect to a reliably grounded 48VDC SELV source or a reliably grounded 60 VDC source.
3. Connect the DC input power cable to the DC connector on the power supply unit.
4. Connect the DC input power cable to the DC connector on the ProStream 1000 back panel, as illustrated in the following figure:

Figure E-4: Connection the DC Input Power

Your ProStream 1000 is now connected to power.

Complete any other cabling that may still be needed, and engage the disconnect device to start using the device.
